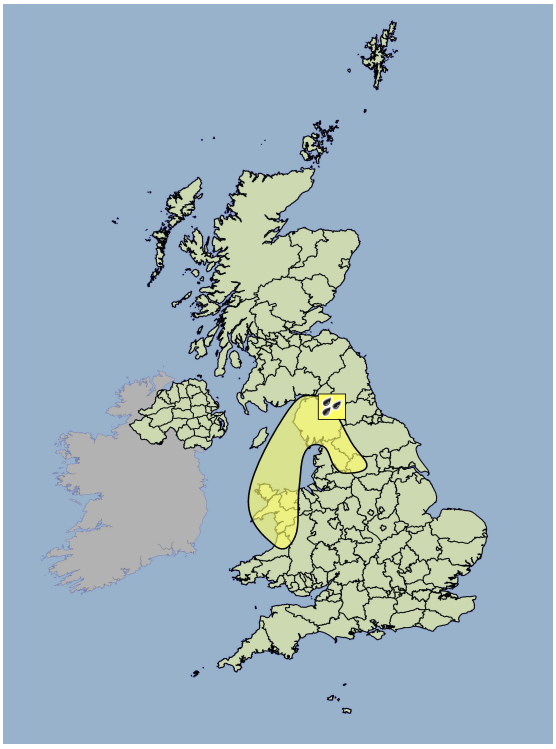
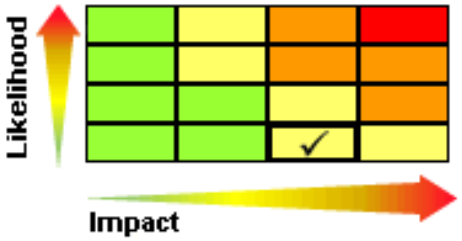
National Severe Weather Warning Service





Chief Forecasters Assessment
Another period of strong, moist southwesterly winds is likely to bring heavy rain to some areas, particularly high ground in western Britain, where totals for this period may very locally reach around 80 mm. More widely we are likely to see totals of 25 to 50 mm, which although relatively modest for these areas, may still lead to localised medium impacts given the pre-existing saturation and sensitivity.

There is uncertainty in the focus of heaviest rainfall at this stage, with updates to the warning expected in the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **12:00 on Mon, 21st Dec 2015** until **18:00 on Tue, 22nd Dec 2015**

Further spells of heavy rain are likely to affect parts of north Wales and northwest England at times during Monday and Tuesday.

Please be aware of the risk of localised flooding and disruption, with the situation remaining sensitive in some areas affected by recent flooding.
